The main aim of the project is to provide guidance to the students regarding the examination hall. Provides directional assistance to the students. Identify security(authorized access). And also Provides real-time feedback to the examination authority about the student attendance using Embedded C, IoT.

School Management System CRUD operations using Angular & Django with Django RestFramework

Frontend Framework: Angular

Backend Framework: Django &

Django_Rest_Framework

Database: MYSQL

IDET: Visual Studio Code

API TOOL: POSTMAN

Operations: Crud Operations

Student Registration System

Frontend: HTML, CSS, JavaScript/JQuery

Backend: Python(Django Framework)

Project Overview:

The Student **Registration System** is a dynamic, web-based application designed to allow students to register for courses, update personal details, delete records, and view a list of all registered students. The application emphasizes a smooth, interactive user experience, with all actions handled via AJAX to prevent page reloads. This system is targeted at students who have completed their 10th class and are looking to join an intermediate college.

SKILLS
